

ALARMBuilder Pro™ | Simplifying Intrusion Detection System Design

Bosch B and G Series Alarm Control Panels

ALARMBuilder Pro™ Download Request and Support

- **ALARMBuilder Pro™** is only available to select partners
- [Click here to request ALARMBuilder Pro™](#)
- [Click here to request system design assistance](#)

Release Notes for v1 rev04072024

- Bug fix on UL2050 tab.

Release Notes for v1 rev04052024

Known Limitations

- **ALARMBuilder Pro™** only generates a preliminary design. Please validate all part numbers with [Chesapeake & Midlantic Marketing](#) or [your local Bosch representative](#) before finalizing. Sensors, output devices, auxiliary power supplies, and wireless repeaters may be required.
- This version does not do power calculations. You need to add all the sensors and all the notification devices in order to make a meaningful power calculation.
- This version does not provide auxiliary power supplies.
- This version provides enclosures for expansion modules, if necessary, but does not break them out by IDF.
- The Fire tab does not provide supervisory hardware or power supervision.
- The Addressable field in the Fire tab cannot account for addressable devices and only calculates the number of POPITs required.

System Designer Tab

- System will choose minimum panel that meets all your requirements – consider allowance for future system expansion

UL2050 Tab

- For US government projects
- Includes the following recommended accessories:
 - Attack resistant enclosure
 - Telephone adapter
 - Transformer enclosure
 - Dual batteries
- Only G series panels shown

High Security Tab

- For UL 1610 applications and high threat environments
- Includes the following recommended accessories:
 - Attack resistant enclosure
 - Transformer enclosure
 - Dual batteries
- When B series panel is indicated, enclosure backplate is added

Distribution Tab

- Only shows products available from distribution partners

Fire Tab

- For UL 864 applications
- Only shows B925F and B926F
