Re: Zonex modules discontinued

Bosch is announcing the discontinuation of the D8128D, D8129, D8125, D8125MUX and ENKIT-01 Zonex modules due to several obsolete components.

These products will no longer be available for sale after December 31, 2023. We will continue to provide service and support for these modules until December 31, 2028.

For new installations using Bosch B8512G or B9512G panels, Bosch recommends the following replacements:

Discontinued module	Replacement	Link to more information
D8128D	B208 8-Output Module	<a href="#">B208 Product Page</a>
D8129	B308 8-Output Module	<a href="#">B308 Product Page</a>
D8125	B299 POPEX Driver	<a href="#">B299 Product Page</a>
D8125-MUX	No replacement	-
ENKIT-01	ENKIT-SDI2 Inovonics Interface Module	<a href="#">ENKIT-SDI2 Product Page</a>

These modules offer several key advantages including:

- Rotary Switch addressing – no binary dip switches
- SDI2 bus wiring – ability to mount the module remotely from the panel
- Molex connectors – include interconnect jumpers when mounting multiple modules in the same location
- Heartbeat LED – simplified health monitoring and troubleshooting

Please contact your Bosch representative if you have any questions.
