G SERIES

PROTECT

Seriously protective.

For companies serious about protecting their team, space, and assets, the G Series control panel goes beyond sounding an alarm to next-level security you can feel—day and night. It's your business partner in protection, designed to seamlessly connect and integrate every component of your alarm system with round-the-clock monitoring, instant alerts, and control in the palm of your hand.

From the moment you open your doors to the last person leaving and every hour overnight, the G Series is seriously protective. For safety beyond intrusion, trust beyond compare.

PROPPED DOORS

Secure all areas and access points.

If a door is propped open — even for a moment — the perimeter of the building is no longer secure. The control panel can be programmed to tell when the door has been open too long, like five minutes instead of one.

- Unsecured doors are open, unarmed access (or egress) points
- They hinder effectiveness (fire doors)
- The control panel can detect open doors and how long they've been open
- The system sends notifications to the appropriate personnel
- Audible alerts are activated near the door
